

# WOPiXX installation guide - version 2.11

13.07.2015/HW

Please read this document completely if an installation of Toolmaker **WOPiXX** is scheduled for the first time.

If you are going to test **WOPiXX** separately from other Toolmaker products, you need a logical partition or a test system, where no libraries like DIRWEB, WOPIX, DIRARC, DIRMAIL or DIRDIAL are installed.

**Attention:** Beginning with the third quarter of 2015 the IBM release V7R1M0 or higher is required for installation of **WOPiXX** and other Toolmaker products.

---

## Upgrade from directweb to WOPiXX.

If there are Toolmaker products already working together with directweb (library name DIRWEB) on the current system, be carefull and observe the following hints.

**WOPiXX** has been modified on important interfaces against the earlier product **directweb** and there is no complete compatibility to elder versions of Toolmaker products.

**WOPiXX** and **directweb** are using the same library DIRWEB. The product **WOPiXX** itself is using library WOPIX (only one X) for service programs in addition.

To see if you are working with **directweb** or **WOPiXX**, display the library description with DSPLIBD DIRWEB. If the version number is 2.00 or higher, **WOPiXX** is installed. A version number 1.xx means, **directweb** is installed.

---

## Installation instructions for TIM

**TIM** is the Toolmaker Installation Manager. It must be installed once before **WOPiXX** and other Toolmaker products.

Here is a short list of required steps for installation of **TIM**.

Please read the following document:

[http://www.toolmaker.de/download/temp/tmstim/TIM\\_Manual\\_english.pdf](http://www.toolmaker.de/download/temp/tmstim/TIM_Manual_english.pdf)

### Check the system requirements on the iSeries

- IBM V7R1 is required to use all SQL and **WOPiXX** functions
- FTP service must be active
- CHGFTPA F4 must be set to

Initial name format . . . . .	*LIB
Initial directory . . . . .	*CURLIB

## Download the Toolmaker Installation Manager TIM

<http://www.toolmaker.de/download/temp/tmstim/TMSTIM.htm>

## Installation of TIM from the PC into the iSeries

- Doubleclick the downloaded EXE-File
- Click to go on and then click Setup
- Insert the iSeries IP address, QSECOFR and password
- Click INSTALL right above
- Wait till **TIM** was installed on the iSeries. This takes about 7 minutes.

## Signon to the iSeries with QSECOFR and password

- GO TIMENG
- Select option 5 Change configuration
- Change the entry **TIM\_USRLIST** with 2 and add the iSeries user name, which should be used in the future. This profile must have \*ALLOBJ and \*JOBCTL authority. After enter you do not need to signon with QSECOFR to work with TIM anymore.
- Change the entry **TIM\_LANGUAGE** to ENG, if this is not yet done
- Check the communication with the Toolmaker FTP server by using 5 on entry **LAST\_PING\_RESULT**
- Leave the configuration program with F3
- You may now sign off and resign on with the user name inserted at **TIM\_USRLIST**.

---

## Installation instructions for WOPIXX

### Create an order for the installation of WOPIXX

- Select option 1 Display status TIM in the menu
- Check if there is an order for **WOPIXX** already in action, then stop. If it is an old **WOPIXX** order in status FINISHED, remove it with F11 and REMOVE\_ORDER. If there is an open order in \*HLD, only the first part of installation (preparations) is allowed to run. Release it with F11 and **CHANGE\_ORDER** if it is the right time now. An order with status ERROR must be checked and cleared before you can go on.
- Hit F11 Order and place an order for installation of **WOPIXX**
- Select the entry **INSTALL\_PRODUCT** with 1, enter
- **TIM** is going to download some info files (this takes only seconds)
- Select **WOPIXX** with 1, enter
- Select option 3 for immediately installation if you are going to install **WOPIXX** the first time. Otherwise take option 1 (\*HLD/preparations).
- Back in the **TIM** status display leave with F3

### Start the installation process

- Select option 26 Start **TIM** SBS

### Monitoring the installation process

- Select option 1 Display status **TIM**
- Check Status **TIM** in the headlines and the current work below
- Hit F10 to see more info about the status of a product, PTF or ADDON installation or ERRORS with hints to go on.
- Hit F5 to see the progress
- Please be patient while **TIM** is doing the batch installation

**Check if installation status is on FINISHED**

- Select option 1 Display status **TIM**
- Check if all order lines are in status FINISHED
- If yes, leave with F3 and select menu item 27 to end the TIM subsystem
